

Fixed Issues in Release 6.14.0.1

This section is a list of issues that have been fixed in the current release.

Component	Issue	Description
Access Control	CE-118833	In the Manage Users page, incorrect number of users are displayed in the first page.
Access Control	CE-120520	When User Inactivity Log is provided with read access, Application Builder menu is wrongly displayed in the Administration menu.
Access Control: Access Roles	CE-120172	Access Role rights can be given to Data Feed pages which are no longer accessible.
ACR	CE-120097	Unable to export ACR for Data Feeds.
API (Web, Rest, other)	CE-120476	No validation for RemoveUserFromGroup and RemoveUserFromRole api calls.
Application Builder	CE-120447	Field Name with leading spaces were being eliminated, resulting in an issue where if there was another field with the same name but without leading spaces, it would trigger a "not a unique field name" error.
Application Builder	CE-120531	Incorrect Label was coming for Text Box Layout Object. Show Help Text checkbox was coming in Text Box Layout Object.
Application Builder, Database, Rest API Suite	CE-120517	Get field information by field ID REST API call returns incorrect MaximumSelection value for values list field with radio button control. Note: In previous Archer versions, in some cases, through data import - users can import more than 1 value into a values-list field with dropdown and radio button controls. This will no longer be allowed starting from 6.14.0.1 since we are enforcing the max selection to be 1 for dropdown and radio button controls.
Application Builder, Packaging	CE-120119	Some Sub-forms keeps loading when trying to open them and App Builder blanking out when adding a Sub-Form field.
Calculations	CE-120267	Wrong errors in "OtherText" calculations of value list. Fixed by encoding the quotes before feeding data to calc engine.
Database	CE-120333	Improve performance of Client Monitor table transactions.
Data Feeds	CE-120295	The code logic during the append validation message for the update Data feed process was incorrect which was causing the issue and user was not getting the validation message.
Data Feeds	CE-120521	Data feed error UI does not filter results properly.
Data Feeds, UI	CE-120454	Implemented code change to incorporate the missing functionality in the ui-components repo for the radio button group control.
Export	CE-120451	Error while exporting record in PDF, RTF and HTML format when an MRDC field references a values list via cross-reference to 2nd level of the cross-referenced application.
Export	CE-120465	The export output of a report is different from what is appearing in Archer on the report.
Jobs	CE-119490	Delete Cleanup Jobs failing due to foreign key constraint errors FK_tblCalcSelectValue_tblIIVSelectValue.
Job Framework	CE-119786	Some job records are never being cleaned up in tblAsyncInstrumentation table.
Job Framework	CE-120297	Delete cleanup jobs failing due to foreign key constraint errors FK_tblFolder_tblModule.
Notifications	CE-120245	Duplicate Notification Schedules created by multiple package installations of same package containing scheduled notification.
Notifications	CE-120414	In the Application and Admin Notifications, fields are not being pasted into the Subject and Body text boxes at the cursor position.
Packaging	CE-120003	Workflow fields will be populated for newly created application/Questionnaire. For already affected records\applications please run the one-time script attached.
Packaging	CE-120443	Fixed the code in the Common Library. Post that, the directional search report is installing correctly.

Packaging	CE-120466	Sub-form > sort field > primary or secondary sort field id was getting save as "zero" if we do not select any sorting.
Questionnaires	CE-120423	Locked fields can be deleted from the layout in Application Builder.
Questionnaires	CE-120564	Unable to set individual formatting styles for question fields in questionnaires.
Questionnaires, Record Page	CE-119728	Data loss in records after clicking Save.
Record Page	CE-120413	In task management related record, if there is a cross reference field column and the status field column, the value inside the cross reference field will not be displayed.
Record Page	CE-120405	When the dialog appears, the screen reader should announce the title of the window.
Search and Search Results	CE-119651	Drill down statistical report will return correct results. Please use one-time script provided to restore correct values in db.
Smart Data Publication (SDP)	CE-120391	Smart Data Publication (SDP) fails with "Collection Can't Be Empty" error for users and groups detail.
Workflow (AWF)	CE-120323	Due to increased load to the server, save of assessment campaign takes too long causing a timeout which causes a failure in assessment campaign generation.
Workflow (AWF)	CE-120313	User initiated AWF content displayed the action button(greyed out) after it has completed the workflow.
UI	CE-120419	Keyboard focus was not visible for subheading under advanced search page.
