# Fixed Issues in Archer Release 6.14 Patch 2

| Component | Issue | Description |
|---|---|---|
| Access Control: Reports | CE-120767 | When a user account's manually assigned role is removed, the existing group-assigned roles that were previously are listed as added, in the Security Events report. |
| ACP | CE-119616 | After updating to 6.12, the instances in the Archer Control Panel open with a '*', indicating unsaved changes. |
| ACP, Authentication, Login Home Page | CE-120375 | The single sign-on (SSO) user can not see the custom message when the account lockout message option is selected in the Archer control panel with a custom message. |
| API (Web, Rest, other) | CE-120733 | While the 'Advanced Workflow Actions by email' option is enabled for the user, activating or deactivating the user via Rest API throws an error. |
| API (Web, Rest, other) | CE-120585 | Archer Web Services API incorrectly encodes the ampersand as "&amp;amp;" rather than "&amp;". |
| API (Web, Rest, other) | CE-120476 | The API calls 'RemoveUserFromGroup' and 'RemoveUserFromRole' return a success status even for the incorrect input. |
| Application Builder | CE-120687 | The 'Select Default Users/Groups' popup in the 'Default Users/Groups' section of the automatic record permission field does not load. |
| Application Builder | CE-120674 | When the user copies the questionnaire layout, Archer displays an unexpected error. |
| Application Builder | CE-120650 | The 'Created By' and 'Last Updated By' fields are empty if the user who created or last updated the application is deleted from the system. |
| Application Builder | CE-120635 | While the minimum and maximum values for the 'Related Record' fields are both blank, adding a record to this field on the record page results in the maximum allowable violation warning. |
| Application Builder | CE-120629 | The global values list, which contains values with the '<' and '>' symbols, is exported incorrectly, causing DPS reports to fail. |
| Application Builder | CE-120628 | The task-driven landing page in the multi-level application fails to direct the task assignee to the application child-level record. |
| Application Builder | CE-120553 | Delete the layout throws an error in the browser console, and the layout is not removed from the application. |
| Application Builder | CE-120344 | The Text Box layout object does not have the Open-Sans font style. |
| Application Builder | CE-120276 | The field dependency message shows 'Encrypt' even when the field encryption is not enabled in the ACP. |
| Application Builder | CE-120145 | Formula Editor does not match parentheses correctly due to escape character being used as a character to be searched in the FIND formula. |
| Application Builder | CE-120095 | In the Application Builder layout Designer, the copied field's name does not save with the new name. |
| Application Builder | CE-120049 | In Application Builder, when a user enters a specific date value for the Date field configuration, it does not save correctly. |
| Application Builder, Packaging, | CE-120592 | When a user adds a subform field to the application, the UI becomes blank. Opening that subform also loads the UI forever. |
| Bulk Operations, Scheduler | CE-119787 | The bulk scheduled monthly jobs do not begin on the scheduled day once Daylight Saving Time begins. |
| Calculated Cross References | CE-120688 | When a user clicks on the name of a reference field with a grid display, it collapses and expands without any drop-downs to indicate the same. |
| Charts and Graphs, Export, Reports | CE-120723 | When a user exports a Heat Map report to PDF/RTF format, the zero values are displayed even though the "Display Zero Values" option is unchecked. |
| Content API, Database, Data Feeds | CE-120745 | The Content API returns an internal server error for some applications. |
| Content Save and Delete | CE-120653 | Unable to Save New Records with Applications that have empty DDE Actions or when multiple DDE Apply Conditional Layout actions are applied on "Multiple Reference Display Control" and "Cross Reference" fields at the same time. |
| Content Save and Delete | CE-120441 | When creating a record for cross-referenced application, where GVLs are also present, if GVL is edited, followed by Save and Close of the referenced application record, Archer displays the message "The input is not a valid Base-64 string". |
| Content Save and Delete, HTML Sanitiz | CE-120632 | When a user enters the HTML code using the Rich Text Editor Source Code and saves the record, the page continues to load and is timed out. |
| Data Driven Events | CE-120754 | The "Changed" operator on a Related Records field in a DDE Rule evaluates to True even if no modifications are made to the fields. |
| Data Driven Events | CE-120752 | When a user saves a DDE rule with the "Changed to" operator, it changes to "Equals" after one or more values for a cross reference field are selected. |
| Data Driven Events | CE-120467 | When a user configures a Set Date action with a Date Only field of 'None' type and selects the 'Current Date' option, the date is always set to the previous day. |
| Data Driven Events, Record Page | CE-120769 | When a user saves a record, the values list field minimum validation appears incorrectly. |
| Data Feeds | CE-120731 | In an XML file exported by a transport-only data feed, the ampersand sign is encoded as '&amp;'. |

| | | |
|---|---|---|
| Data Feeds | CE-120644 | After the package installation, only one day is selected for the weekly data feed that was configured to run on all weekdays. Note: This fix is specific to packages that are generated in 6.14.0.2 or later versions, the issue will persist for packages generated in 6.14.0.1 or before. |
| Data Feeds | CE-120437 | When a user adds a data feed, the cross reference field cannot be mapped to the field that is referring to itself. |
| Data Feeds, Globalization and Localiza | CE-120734 | When a user with the English (Canada) or English (Australia) locale saves the data feed, an unexpected error occurs. |
| Data Feeds, Performance | CE-120342 | The data feed execution takes longer than expected after upgrading to 6.13.0.1. |
| Data Import | CE-120558 | Although the data feed is faulted, the run details show the number of records created in the system. |
| Data Import | CE-120026 | When a user imports decimal numbers in a different locale format, data import fails. |
| Database, Data Feeds | CE-120729 | The datafeed schedules are reset to their default values after a SaaS instance refresh. |
| Export | CE-120615 | User is unable to export to excel because cell constraints limit characters to 32,767. |
| Export | CE-120608 | Getting Failure while exporting some questionnaires records in PDF format for the SaaS customers. |
| Export, Global Print and Export | CE-120618 | Excel Export displays a waterfall pattern for each new column. |
| Export, Reports | CE-120498 | First Published date fields are not exported correctly from the Report page for users in the Australian timezone. |
| Export, Reports | CE-120073 | Horizontal bar chart is not exported correctly when there are long labels in the vertical axis. |
| Global Print and Export, IIS Web Serve | CE-120213 | Exporting the system report with a large number of records results an IIS outage. |
| Globalization and Localization | CE-120563 | When a user selects a date from the date grid, the incorrect day is displayed. |
| HTML Sanitizer | CE-120596 | The user is unable to save the record with the relative path in the Text Area area field. |
| IIS Web Server | CE-120692 | Large Print/Export activities cause stack overflow resulting in W3WP.exe process hanging. |
| IIS Web Server | CE-120691 | The SetUserDefaultEmail API call tries to insert duplicate values into the table that doesn't allow duplicates. |
| Job Framework | CE-119164 | CondenseEnquedJobsWorkflow jobs have incorrect version information. |
| Master Report Listing, React Common | CE-119717 | The Reports Listing page takes a long time to load. |
| Navigation, UI | CE-120270 | The "skip navigation" heading appears at random. |
| NextGen Dashboard | CE-120684 | The user is unable to rename the Dashboard since the cursor location moved to the end after typing one character. |
| NextGen Dashboard, Workspaces, Das | CE-120698 | When a user adds a marker to one widget on the Next generation dashboard, it is added to all widgets. |
| NextGen Dashboard | CE-120831 | The font for featured metric reports is inconsistent. |
| Notifications | CE-120732 | Attachment fails in the email when a cross reference field is referencing a leveled application. |
| Notifications | CE-120624 | When a user configures an HTML table in the Notification template, the format of the notification email is not as configured. |
| Packaging | CE-120667 | While installing a network graph report from a package, an error occurred. |
| Packaging | CE-119603 | The package installation log displays a failure if the package contains the renamed application with Advanced Workflow configurations. |
| Questionnaires | CE-120776 | In Questionnaire Values-list field configuration, the references selected in the Authoritative Sources section are displayed in the Control Standards references. |
| Questionnaires | CE-120560 | The user is unable to set a time for a scheduled campaign. |
| Queuing Service | CE-120575 | Performance issues cause the Archer Queuing service to stop. |
| Queuing Service | CE-120259 | Queuing Service crashes when processing certain types of PDF files |
| Queuing Service | CE-119341 | Queueing Service stops working and needs to be restarted after instance refresh |
| Record Page | CE-120623 | When a user configures DDE to set the values list field to 'No Selection,' the DDE action is not triggered properly. |
| Record Page | CE-120548 | The user can upload any file type to the image field. |
| Record Page | CE-120421 | When a user navigates between tabs after clicking on a cross-reference, an error page is displayed. |
| Record Page | CE-119337 | The external link field cannot be saved if the URL contains the "&" character. |
| Reports | CE-120756 | Drilling down on a statistical report and then saving the changes results in a warning that the report name isn't unique. |
| Reports | CE-120660 | In the statistical mode, Group By two fields and count of another field throws an error in the 'Charts Only' and 'Charts and Data' search. |
| Reports | CE-120626 | The user is unable to scroll past the first 7 numbers when the numeric range field is filtered by range. |
| Reports | CE-120586 | If a user shares a report and then needs to change it, the report is no longer shared. |
| Reports | CE-120569 | In the Report Properties modal, the symbols 'Greater Than' and 'Less Than' in report titles are not rendered correctly. |
| Reports, Search and Search Results | CE-120587 | After upgrading to 6.13.2, the Task Management lost its relationships in the Advanced Search Reports. |
| Scheduler, View Mode (Record) | CE-120783 | The edit and view buttons in the Timesheet task application are not working. |
| Signatures, Workflow (AWF) | CE-120775 | Configuring AWF signatures sometimes causes properties pane UI to break |

| System Reports | CE-120197 | Even if a different report is later chosen, the Record view detail report returns reports for the initial application. |
|---|---|---|
| Tools, Web API suite | CE-120766 | The UpdateUserAccountStatus API request to update the user fails if the user has the option "Enable the action by email" checked. |
| User Profile | CE-120750 | The 'Refresh' button/icon is not present on the Email Subscription, Login History, Bulk Action History, and Data Import History pages. |
| Workflow (AWF) | CE-120717 | AWF Bulk Update Jobs status popup window shows as "0 of 0 completed" even when the process has completed updating the AWF jobs . |
| Workflow (AWF) | CE-120582 | Improvement to WorkflowCleanupJobHandler system job to also cleanup AWF jobs in error state based on the 30 days retention policy. |
| Workflow (AWF) | CE-120574 | AWF seems to stop working correctly after Warm Deploys of Archer |
| Workflow (AWF) | CE-120572 | AWF stopped working in SaaS environment. |
| Workflow (AWF) | CE-120557 | AWF stops working after Windows security patches |
| Workspaces, Dashboards and iViews | CE-120661 | When a record is accessed via Next Gen Dashboard > Report and data is added and saved for a sub form, the issue occurs. |
| Workspaces, Dashboards and iViews | CE-120601 | When a user creates a quick link for an internal page that has a link to Manage questionnaires or Manage subforms, the page does not respond. |
| Workspaces, Dashboards and iViews | CE-120578 | Dashboard does not display a report with colored values for the Value List column. |
