

## Fixed Issues in Release 2025.12

This section lists the issues that have been fixed in the current release.

**Note:** When users upgrade from Archer versions prior to 6.14 to Archer versions 6.14 or above, the work item cleanup to improve the Advanced Workflow performance might delay the installation.

| Component                         | Issue     | Description  |
|-----------------------------------|-----------|--|
| ACP, Appearance, SAML, UI         | CE-122627 | SSO Provider is not available by default in the drop-down menu on the new login page.  |
| API                               | CE-121939 | Validation message for GetSessionExpirationTime endpoint improved to provide a better user experience.   |
| API (Web, Rest, other)            | CE-122735 | Adding content to a new date field via APIs fails when caching is enabled.   |
| API (Web, Rest, other)            | CE-122973 | The UpdateUserEx API method fails when 'Advanced Workflow Actions By Email' is enabled for the user.   |
| API (Web, Rest, other)            | CE-123315 | When using a Personal Access Token, the system fails to start the Advanced Workflow job, causing record creation through the API to fail.            |
| Access Control                    | CE-121982 | Sessions without a logout time appear as Active in the Login History tab.  |
| Access Control                    | CE-121878 | Improper behavior on Manage Users Roles and Groups tabs with hierarchical group membership   |
| Access Control : Access Roles     | CE-121727 | When a user selects "Edit Values" in Back Office for a value list, it displays a permission message.   |
| Access Control: Access Roles      | CE-121864 | Potential memory leak encountered while navigating in the Access Role Rights grid.   |
| Admin Dashboard                   | CE-121750 | SQL server database actual size does not match to admin dashboard display databasetotalsize  |
| Announcements                     | CE-121841 | Announcement Feature does not display as Expected for Future Dates   |
| Application Builder               | CE-121102 | Users experience an unexpected behavior where a popup closes prematurely upon modifying a cell value in Dropdown values with multi-select            |
| Application Builder               | CE-121904 | Inactive Nested Values are displayed in dropdown list of Values List Field   |
| Application Builder               | CE-121909 | Filters of the Report Object are empty when creating a Report Object in the application.   |
| Application Builder               | CE-121993 | Sometimes the field names in the calculation filters are displayed blank when expanding the properties of a calculated XRef field                    |
| Application Builder               | CE-122362 | Downloading documentation uploaded in the Application Builder is restricted unless sysadmin rights are provided.                                     |
| Application Builder               | CE-122480 | Input mask on Text field switches from Email to SSN when the calculated field setting is disabled.   |
| Application Builder               | CE-122665 | The Last Updated date and time do not update for the Values List field and module when the field is promoted to a Global Values List.                |
| Application Builder               | CE-122723 | Unable to change Tab name when Tab Set contains one Tab.   |
| Application Builder               | CE-122789 | Default search throws a Null Reference exception when it includes a cross reference field.   |
| Application Builder               | CE-122869 | A validation error occurs when trying to change the name of some calculated fields.  |
| Application Builder               | CE-123062 | The Findings tab in the Questionnaire does not open even when 'Enable Findings' is checked.  |
| Application Builder               | CE-123348 | The system does not load a specific sub-form field in the App Builder, preventing it from opening or being edited.                                   |
| Application Builder               | CE-121920 | Field level filtering is not working when the name contains > symbol   |
| Application Builder,Questionnaire | CE-121721 | New campaign filter does not able to search users  |
| Attachments                       | CE-123337 | The system is unable to upload certain attachments when they are in Protected View.  |
| Attachments,Application Builder   | CE-121948 | Attachment Field Download History Link is not accessible through copy link   |
| Bulk Operations                   | CE-121385 | Unable to search for cross referenced records when utilizing bulk update option  |
| Bulk Operations                   | CE-122696 | The 'Mapped' operator in a Bulk Create References Action does not work as expected.  |
| Bulk Operations                   | CE-122863 | The Bulk Action History doesn't show any data, even though bulk actions complete successfully  |
| Caching                           | CE-122711 | Configuring ScaleOut StateServer in the installation settings tab does not update the Installation property to IsSaaS cachingEnabled.                |
| Calculated Cross References       | CE-123320 | The "No Selection" value in related filters causes calculated cross-references to return no matches.   |
| Calculations                      | CE-121324 | ROUNDDOWN function is Off by .01 when we have more than 3 digits   |
| Calculations                      | CE-121758 | The calculation returns an error when a text field contains numbers followed by a space.   |
| Calculations                      | CE-122576 | Whitespace within a REF statement causes a calculation error.  |
| Calculations                      | CE-122599 | Scheduled Recalculation Job does not update fields when SYSTEMTODAY() is used in the formula.  |
| Calculations                      | CE-122643 | Calculated Values Lists field evaluating text fields not working if Values List Value contains a space.  |
| Calculations                      | CE-121869 | Text field including &nbsp; was not retained upon calculation  |
| Calculations                      | CE-123321 | Self-referencing formulas create infinite calculation jobs, which consume excessive server resources.  |
| Calculations , Data feeds         | CE-121866 | The calculated field regex fails at the edge cases where the tags are self-closing   |
| Calculations, Packaging           | CE-121919 | Package with field names containing special characters caused the package installation fail.   |
| Charts and Graphs                 | CE-121801 | Labels for charts are not retained when closing the modify window in a statistical report  |
| Content Save and Delete           | CE-121853 | Unsaved changes pop up not displayed when closing draft record after a required field warning is thrown  |
| Data Driven Events                | CE-121836 | External link field not updated upon deleting link before the field is hidden and then saving record after the field is hidden                       |
| Data Driven Events                | CE-122662 | An unrelated field is being set to read-only due to a DDE action.  |
| Data Driven Events                | CE-122686 | An error occurs when generating a DDE Summary report for an application with cascade-enabled DDE actions.  |
| Data Driven Events                | CE-122708 | Multiple Reference Display Control (MRDC) field becomes grayed out when displayed as a result of another field's selection triggering by DDE action. |
| Data Driven Events                | CE-122737 | The layout does not hide the section properly after applying a DDE "Conditional Layout.  |
| Data Driven Events                | CE-122870 | The remove button for the Grid Cross-Reference field is not displayed after progressing through AWF.   |

|  |           |  |
|--|-----------|--|
| Data Driven Events                         | CE-122933 | Required fields that are not populated do not trigger validation during the initial save of a new record.  |
| Data Driven Events                         | CE-122966 | Data-driven events do not hide actions because of a caching issue.   |
| Data Driven Events                         | CE-123115 | The Attachment field does not appear when required and read-only DDE actions apply to it.  |
| Data Driven Events, Record Page, UI        | CE-122691 | Set DDE action was not working when the Date field was set to read-only by another DDE.  |
| Data Feeds                                 | CE-121591 | Duplicate scheduled jobs are created for a Datafeed intermittently.  |
| Data Feeds                                 | CE-121804 | Data feed faults when used transport only that runs a delete statement   |
| Data Feeds                                 | CE-122659 | Data Feed Source File remains undeleted after the datafeed execution is complete.  |
| Data Feeds                                 | CE-123346 | A data feed fails when a Statistical Report includes date fields grouped by day that contain no values.  |
| Data Feeds                                 | CE-123362 | Data feeds remain stuck in a running state and do not process any records after the upgrade.   |
| Data Feeds                                 | CE-123364 | The data feed cannot find the attachment files during import unless Relative Path is enabled, causing the attachments to be skipped and a warning to appear.                                     |
| Data Feeds; Globalization and Localization | CE-123027 | The A2A data feed does not correctly process dates when the source is a statistical report.  |
| Data Import                                | CE-121949 | Mapping Data Import Value List Fields with Identical Field Names triggering a key field mapping warning.   |
| Data Import                                | CE-122729 | Review Job Queues throws an unexpected error while data import is running.   |
| Data Import                                | CE-122898 | Sub-Form data import works in English but fails in Portuguese.   |
| Database                                   | CE-122641 | Some data was not being processed correctly due to inconsistencies in how numerical values were handled.   |
| Database                                   | CE-122745 | Improved the tblAsyncInstrumentation cleanup to resolve the timeout issue. It now runs more efficiently, handles large volumes of data in a single run, and prevents old data from accumulating. |
| Database                                   | CE-122815 | The issue occurred because the system attempted to delete a filter criteria without first removing its related entries in the notification template settings.                                    |
| Database                                   | CE-122827 | The stored procedure 'usp_reindex_content' creates inefficient query plans, causing high logical reads and longer execution time.  |
| Database                                   | CE-122881 | Upgrade failures due to data integrity issues in the Admin Dashboard migration.  |
| Database                                   | CE-123028 | When the Field Encryption job runs on databases with a large volume of field history log data, it causes severe performance degradation and blocks users from saving records.                    |
| Export                                     | CE-122615 | HTML tags appear in exported CSV/XLSX even when the 'Export Without HTML Tags' option is selected.   |
| Export                                     | CE-122784 | Large mail merges export significantly slower with DevExpress, while switching to Apose improves performance   |
| Export                                     | CE-122935 | The Cross-Reference Value List is truncated in PDF export.   |
| Export                                     | CE-123101 | During export of search results, cross-reference fields configured to display a tree-level structure exclude higher-level contents.  |
| Export                                     | CE-123338 | Text indents inside tables do not apply correctly during Mail Merge exports.   |
| Export                                     | CE-123339 | When exporting a list using Mail Merge, the document styling does not apply correctly to all values.   |
| Export                                     | CE-123340 | HTML fields do not retain the template formatting when exporting or sharing using Mail Merge.  |
| Export, Reports                            | CE-123172 | Export fails for an application with a subform that contains a cross-reference field.  |
| Export, Mail Merge                         | CE-121889 | Mail merge export throws an error when exporting a field that has accent "à"   |
| Global Search                              | CE-121682 | The Global Search Results and History Log shows incorrect ampersand encoding   |
| Global Search                              | CE-121707 | An error occurs when attempting to use the global search while the new data import page is shown   |
| Global Search                              | CE-122893 | Archer Front Office test pages are accessible for features that are not yet deployed.  |
| Globalization and Localization             | CE-121821 | The Global Values List Description fails to display the translated description text when the user switches to the other locale   |
| Globalization and Localization             | CE-121964 | The imported English translation values are not displayed on the NGD dashboard for users with the English locale following a translation import.   |
| Globalization and Localization             | CE-122875 | Widget Translations get removed after updating or changing the widget name in any language.  |
| Globalization and Localization             | CE-123341 | The chart does not show axis titles correctly on first load when the language is set to French.  |
| IIS Web Server                             | CE-121637 | Blocked IIS worker threads wait on the configuration service, causing IIS to hang and fail the health check with a fatal communication error.  |
| Inline Edit                                | CE-122879 | When a user edits a Date value in an inline edit field and the local system uses a negative time zone (e.g., UTC-6), the date value shifts to a day earlier than the correct value.              |
| Install/Upgrade                            | CE-121735 | Least Privileges DB user is now able to complete the install or upgrade  |
| JS Transporter                             | CE-122679 | JS Transport Data feeds using global are failing.  |
| JST  | CE-122989 | The Engage BulkPublish JST datafeed fails with the error: SCRIPT_RUNTIME_ERROR: One or more errors occurred. ReferenceError: nextTick is not defined.  |
| Jobs                                       | CE-121465 | Improve performance of the job migration stage of the Archer installer.  |
| Jobs                                       | CE-121880 | Improved metadata cleanup activities to gracefully handle all data scenarios.  |
| Jobs                                       | CE-122584 | Some slack messages are not getting processed by system due to a rare dead lock condition.   |
| Log in Home Page                           | CE-121840 | Federation SSO is not working after Upgrade to 2024.11   |
| Mail Merge                                 | CE-121833 | Mail Merge Export Fails when used block capitals for Field Names in the template   |
| Mail Merge                                 | CE-122750 | Mail merge throws an exception when inserting a date into a table section or subsection.   |
| Mail Merge                                 | CE-122772 | Mail merge export fails with the 'Sequence contains more than one matching element' error.   |
| Mail Merge                                 | CE-122773 | Data in the mail merge template becomes distorted when a table is nested within a parent table.  |
| Mail Merge                                 | CE-122809 | Image in the mail merge template gets cropped when uploaded with large dimension.  |
| Mail Merge                                 | CE-123113 | A paragraph marker is added in the mail merge document when a merge field contains HTML formatting   |
| Master Report Listing                      | CE-121763 | Date format does not reflect in the user's locale in the Date filter in Report Listing Page, Manage Global Values Lists, Manage Application Page   |

|  |           |   |
|--|-----------|---|
| Master Report Listing                      | CE-123007 | Master Reports listing takes much time to open.   |
| Master Report Listing, Reports             | CE-122608 | The report listing names no longer appear in the user's selected locale.  |
| Nav Menu                                   | CE-121788 | Incorrect user information and Navigation Menu shows after logging out and logging back in with a different user  |
| Nav Menu                                   | CE-122622 | Navigation menu is taking longer to load than expected to load.   |
| Nav Menu                                   | CE-123363 | The Administration menu does not appear in the navigation for System Administrators when their workspace ID is not 3.   |
| Next Gen Dashboard                         | CE-123020 | Report colors in dashboards change inconsistently when switching between Portuguese and English languages, causing discrepancies across multiple dashboards."                           |
| Next Gen Dashboard                         | CE-123142 | NGD dashboards with IDs containing a four-digit number cannot be copied.  |
| Notifications                              | CE-122610 | Subscription notifications set to send once are being sent daily.   |
| Notifications                              | CE-122787 | The advanced workflow action by email fails when token authentication is enabled in ACP.  |
| Notifications                              | CE-122902 | Scheduled report distribution notifications do not include email attachments when the included report contains zero search results.   |
| Notifications                              | CE-122947 | Scheduled report distributions do not include all reports.  |
| Notifications                              | CE-123080 | The notification subject line displays all possible cross-referenced applications from a Multi-Reference Display Control field, instead of only the populated Key Field value.          |
| Notifications                              | CE-123342 | Notifications remove spaces after fields when bold formatting is applied in the message body.   |
| Packaging                                  | CE-122700 | Package generation fails when reports contain invalid filter fields.  |
| Packaging                                  | CE-122734 | Fields to display of the cross-reference within a subform drop on package install when the target module is not included in the package, even though it exists in the instance.         |
| Packaging,Record Permission                | CE-121757 | Several Record Permissions Rules Not Updating and/or Being Created After Package Install  |
| Questionnaires                             | CE-121917 | Inheriting answers from another question displays only the first five answers in the UI.  |
| Questionnaires                             | CE-121927 | The question field in the Findings application displays tags in edit mode when generated from a questionnaire.  |
| Questionnaires                             | CE-121962 | The images in new and existing questionnaire instructions are broken.   |
| Questionnaires                             | CE-122767 | Inactive scheduled campaigns continue to run according to their schedules.  |
| Record Page                                | CE-121693 | MRDC field with calculated reference does not update on save.   |
| Record Page                                | CE-121741 | Last Updated Date was not updated for related records when adding or removing Cross Reference links.  |
| Record Page                                | CE-121926 | New Assessment Text Area Field references to Target's Text Area fields have trailing <br> tags  |
| Record Page                                | CE-121950 | Value does not save in the date & time field when the locale is set to certain Spanish locales.   |
| Record Page                                | CE-122602 | Adding a new questionnaire with AWF enabled does not show the associated parent record in the cross-reference.  |
| Record Page                                | CE-122634 | When the key field is not on the layout, navigating to a specific record displays the Content ID as the record title instead of the key field.  |
| Record Page                                | CE-122712 | The system displays an 'Invalid Request' message when a user opens an archived application's record with the 'direct to edit' option enabled.   |
| Record Page                                | CE-122722 | Setting a values list value prevents the record from saving and clears the value.   |
| Record Page                                | CE-122778 | The history log layout appears misaligned, affecting the overall structure and readability of the page.   |
| Record Page                                | CE-122860 | Unable to edit the timesheet when accessing it through the audit engagement record.   |
| Record Page                                | CE-123054 | Inconsistent bullet point formatting and text alignment of bullets between Edit and View modes.   |
| Record Page                                | CE-123314 | After the upgrade, bullet points in Text Box layout objects display incorrect indentation and text wrapping, while other layouts appear unaffected.                                     |
| Record Page                                | CE-123347 | Clicking Edit on a values list field shows an old window, and adding a duplicate value incorrectly displays a deletion error instead of "Text Value is not unique."                     |
| Reports                                    | CE-121402 | In statistical report, records with no selection value does not displays correctly in drill when using contains inclusive on a VL   |
| Reports                                    | CE-121738 | Report Navigation Path Needs Additional close click and displays incorrect filtered page  |
| Reports                                    | CE-121766 | Statistical Report Shows Empty for Records with Plus and Minus Signs  |
| Reports                                    | CE-122364 | When exporting a treemap chart with SmartLabels enabled, the value labels were not displaying correctly.  |
| Reports                                    | CE-122694 | Advanced search with Subform filters does not return the expected results.  |
| Reports                                    | CE-122998 | Column misalignment occurs when you resize a column in a report object with fixed headers enabled.  |
| Reports                                    | CE-123350 | When expanding records in a hierarchical report with both Fixed Headers and Inline Edit enabled, the loading cursor persists indefinitely until one of the options is disabled.         |
| Reports                                    | CE-123352 | The "Report Name" field in the Create Report workflow is required but lacks a visual indicator, making it unclear to sighted users and screen reader users that the field is mandatory. |
| Reports, Workspaces, Dashboards and iViews | CE-122688 | Calculated field displays Tracking ID instead of the calculation result in Report Widgets   |
| Rest API Suite                             | CE-121931 | Text between '<' and '>' gets removed from the text field in REST API   |
| Search and Search Results                  | CE-121873 | Filter by Record lookup page in Advanced Search hangs indefinitely when scrolling if any date, first published or last updated fields are included                                      |
| Search and Search Results                  | CE-122586 | SSN-masked text fields return results only when hyphens are included.   |
| Search and Search Results                  | CE-122611 | Advanced search filters are not working as expected when first published date field is included in filters.   |
| Security                                   | CE-123319 | Response call passed unnecessary information in the error message   |
| Security                                   | CE-122663 | The HTTP header copies incorrectly between internal services.   |
| System Reports                             | CE-122674 | Reports Listing is taking too long to open resulting in performance degradation .   |
| System Reports                             | CE-122685 | The Application Field Detail report throws an error for applications with a large number of fields.   |

|                                   |           |   |
|-----------------------------------|-----------|---|
| UI                                | CE-122640 | Value List text color values containing RGBA, 8-digit hex codes were shortened to 6 digits, leading to color change.  |
| UI                                | CE-121536 | Archer is causing memory exhaustion in Chrome.  |
| User Profile                      | CE-121870 | The time zone in the history page for data imports and bulk actions displays in UTC instead of the users time zone  |
| User Profile                      | CE-123351 | After LDAP synchronization, user profile photos disappear from the profile even though the image files remain.  |
| User Profile                      | CE-123186 | When a system administrator creates or revokes a personal access token for a user, the security events report records the initiating user for this action incorrectly.  |
| View Mode (Record)                | CE-121745 | Loading Icon/Spinner is Duplicated On Screen When Switching Back and Forth Between Edit & View  |
| View Mode (Record)                | CE-121768 | Unexpected error throws when attempting to delete record  |
| Workflow (AWF)                    | CE-121823 | Records are getting stuck in planned state, when enrolled in an Advanced workflow.  |
| Workflow (AWF)                    | CE-122670 | Using special characters in the Advaned workflow rules results in XML encoding.   |
| Workflow (AWF)                    | CE-122682 | AWF service degrades due to memory pressure.  |
| Workflow (AWF)                    | CE-122732 | Operators cannot be selected for the subform field in AWF rules.  |
| Workflow (AWF)                    | CE-122978 | The workflow job fails to start with an error when creating a new record in an AWF-enabled application.   |
| Workflow(AWF)                     | CE-121597 | AWF is not getting triggered based on Fields Selected   |
| Workflow(AWF)                     | CE-121782 | When an Advanced Workflow User Action task has the Subject set to a Multi-Lined Text Area field, the Task is shown with HTML tags when the Tasks icon is selected in the upper right corner of the user interface |
| Workflow(AWF)                     | CE-121794 | Renaming an Application with AWF Does Not Update the Process Name on the AWF Job Troubleshooter Page  |
| Workflow(AWF)                     | CE-121930 | AWF record 'save and close' does not close the record in edit mode  |
| Workspaces Dashboard and iViews   | CE-121925 | Custom column headers for statistical report are not reflected in next-gen dashboard  |
| Workspaces, Dashboards and iViews | CE-122795 | An unexpected error is prompted when attempting to access a specific dashboard.   |
