

Fixed Issues in Release 2025.06 UR3

This section lists the issues that have been fixed in the current release.

Note: When users upgrade from Archer versions prior to 6.9.1.1 to Archer versions 6.9.1.1 or above, the work item cleanup to improve the Advanced Workflow performance might delay the installation.

Component	Issue	Description
API (Web, Rest, other)	CE-122735	Adding content to a new date field via APIs fails when caching is enabled.
Application Builder	CE-122789	Default search throws a Null Reference exception when it includes a cross reference field.
Application Builder	CE-122665	The Last Updated date and time do not update for the Values List field and module when the field is promoted to a Global Values List.
Application Builder	CE-121993	Sometimes the field names in the calculation filters are displayed blank when expanding the properties of a calculated XRef field
Bulk Operations	CE-122863	The Bulk Action History doesn't show any data, even though bulk actions complete successfully
Bulk Operations	CE-122696	The 'Mapped' operator in a Bulk Create References Action does not work as expected.
Calculations	CE-122576	Whitespace within a REF statement causes a calculation error.
Calculations	CE-121758	The calculation returns an error when a text field contains numbers followed by a space.
Database	CE-122881	During the US SaaS upgrade, two databases failed to upgrade due to data integrity issues in the Admin Dashboard migration.
Database	CE-122827	The stored procedure 'usp_reindex_content' creates inefficient query plans, causing high logical reads and longer execution time.
Database	CE-122804	The stored procedure usp_search_filter_user_group_equal experiences slow performance and high CPU usage, particularly for instance 330093, due to inefficient temporary table operations.
Database	CE-122815	An issue occurred when the system attempted to delete a filter criterion without removing its related entries in the notification template settings.
Data Driven Events	CE-122686	A DevExpress error occurs when generating a DDE Summary report for an application with cascade-enabled DDE actions.
Data Import	CE-122729	Review Job Queues throws an unexpected error while data import is running.
Export	CE-122784	Large mail merges export significantly slower with DevExpress, while switching to Aspose improves performance
Export	CE-122615	HTML tags appear in the exported CSV/XLSX despite selecting the 'Export Without HTML Tags' option.
Export, Search and Search Results	CE-122759	Exported CSVs lack detailed lower-level record data shown in the on-screen search results.
Export, Search and Search Results	CE-122752	Data misaligned in the exported CSVs compared to on-screen search results.
Mail Merge	CE-122809	The image in the mail merge template gets cropped when uploaded with large dimensions.
Mail Merge	CE-122773	Data in the mail merge template becomes distorted when a table is nested within a parent table.
Mail Merge	CE-122772	Mail merge export fails with the 'Sequence contains more than one matching element' error.
Mail Merge	CE-122750	Mail merge throws an exception when inserting a date into a table section or subsection.
Packaging	CE-122700	Package generation fails when reports contain invalid filter fields.
Notifications	CE-122902	Scheduled report distribution notifications do not include email attachments when the included report contains zero search results.
Questionnaires	CE-122767	Inactive scheduled campaigns continue to run according to their schedules.
Questionnaires	CE-121927	The question field in the Findings application displays tags in edit mode when generated from a questionnaire.
Questionnaires	CE-121917	Inheriting answers from another question displays only the first five answers in the UI.
Record Page	CE-122860	Unable to edit the timesheet when accessing it through the audit engagement record.
Record Page	CE-122778	The history log layout appears misaligned, affecting the overall structure and readability of the page.
Record Page	CE-122712	The system displays an 'Invalid Request' message when a user opens an archived application's record with the 'direct to edit' option enabled.
Record Page	CE-122634	When the key field is not on the layout, navigating to a specific record displays the Content ID as the record title instead of the key field.
Security	CE-122663	The HTTP header copies incorrectly between internal services.
System Reports	CE-122685	The Application Field Detail report throws an error for applications with a large number of fields.
API (Web, Rest, Other)	CE-121147	Text enclosed in angle brackets (< and >) is stripped from the text field when using the REST Create API.
Rest API Suite	CE-121931	Text enclosed in angle brackets (< and >) is stripped from the text field when using the REST Update API.
Data Driven Events	CE-122985	Existing Data Driven Events Not Triggering Hide Actions when System fields are used in rule.
S3 - AWS Simple Storage Service	CE-122968	S3 folders are created at the wrong level, resulting in an unexpected increase in prefixes in the primary bucket.
