Fixed Issues in Release 2025.08

This section lists the issues that have been fixed in the current release.

Component	Issue	Description
Access Control : Access Roles	CE-21727	When a user selects "Edit Values" in Back Office for a value list, it displays a permission message.
API (Web, Rest, other)	CE-22973	The UpdateUserEx API method fails when 'Advanced Workflow Actions By Email' is enabled for the user.
Application Builder	CE-22869	A validation error occurs when trying to change the name of some calculated fields.
Application Builder	CE-22723	Unable to change Tab name when Tab Set contains one Tab.
Application Builder	CE-21909	Filters of the Report Object are empty when creating a Report Object in the application.
Data Driven Events	CE-22966	Data-driven events do not hide actions because of a caching issue.
Data Driven Events	CE-22933	Required fields that are not populated do not trigger validation during the initial save of a new record.
Data Driven Events	CE-22870	The remove button for the Grid Cross-Reference field is not displayed after progressing through AWF.
Data Driven Events	CE-22737	The layout does not hide the section properly after applying a DDE "Conditional Layout.
Data Feeds	CE-21591	Duplicate scheduled jobs are created for a Datafeed intermittently.
Data Import	CE-22898	Sub-Form data import works in English but fails in Portuguese.
Export	CE-22935	The Cross-Reference Value List is truncated in PDF export.
Global Search	CE-22893	Archer Front Office test pages are accessible for features that are not yet deployed.
Globalization and Localization	CE-22875	Widget Translations get removed after updating or changing the widget name in any language.
Inline Edit	CE-22879	When a user edits a Date value in an inline edit field and the local system uses a negative time zone (e.g., UTC-6), the date value shifts to a day earlier than the correct value.

Component	Issue	Description
JST	CE-22989	The Engage BulkPublish JST datafeed fails with the error: SCRIPT_RUNTIME_ERROR: One or more errors occurred. ReferenceError: nextTick is not defined.
Notifications	CE-22947	Scheduled report distributions do not include all reports.
Notifications	CE-22787	The advanced workflow action by email fails when token authentication is enabled in ACP.
Packaging	CE-22734	Fields to display of the cross-reference within a subform drop on package install when the target module is not included in the package, even though it exists in the instance.
Record Page	CE-22722	Setting a values list value prevents the record from saving and clears the value.
Record Page	CE-22602	Adding a new questionnaire with AWF enabled does not show the associated parent record in the cross-reference.
Smart Data Publications(SDP)	CE-23009	Smart Data Publication job fails due to OutOfMemoryException.
S3 - AWS Simple Storage Service	CE-22961	Data feeds create S3 folders at the root level with **incorrect paths**, instead of writing to the correct feed directories.
Workflow (AWF)	CE-22859	Improve logging for self-assessment publish when records do not update back to the Risk Register from Risk Assessment Data.
Workflow (AWF)	CE-22978	The workflow job fails to start with an error when creating a new record in an AWF-enabled application.
Workflow (AWF)	CE-22682	AWF service degrades due to memory pressure.
Workspaces, Dashboards and iViews	CE-22795	An unexpected error is prompted when attempting to access a specific dashboard.
Calculations	CE-12309	Calculation gives a different result after the upgrade.
